

Examples of cases

Isothermal incompressible flows

- 2D Eddy convection in a uniform velocity field
 - 2D laminar channel flow
 - 2D laminar channel flow with a constriction
-

Incompressible flows with heat transfer (conduction & advection)

- 2D laminar channel flow containing a heated square bar
- 2D channel flow with a thermally conductive square bar heated from the top wall
- 2D heat-driven cavity flow
- 2D Rayleigh-Bénard flow
